

Implement tic-tac-toe tasks

[09 tic tac toe](#) this is a simple project with a readme describing what is to be done implement the given tasks, only implement it, i will test it myself

6 previous messages

I'll inspect the project README and existing code, then implement only the requested tasks without running or modifying unrelated files.

Ran 3 commands

- Ran `Get-ChildItem -Recurse -File | Select-Object -ExpandProperty FullName; Write-Output '-- README candidates ---'; Get-ChildItem -Recurse -File -Filter README* | Select-Object -ExpandProperty FullName`
- Ran `Get-Content -Raw README.md; Write-Output '--- files ---'; Get-ChildItem -Recurse -File | Select-Object FullName; Write-Output '--- main.py ---'; Get-Content -Raw tic-tac-toe/main.py`
- Ran `Get-Content -Raw game/game_engine.py; Write-Output '--- rules ---'; Get-Content -Raw game/rules.py; Write-Output '--- ai ---'; Get-Content -Raw game/ai.py; Write-Output '--- renderer ---'; Get-Content -Raw game/renderer.py`

The project is a compact Pygame implementation with the intended gaps isolated in `game_engine.py`, `rules.py`, and `renderer.py`. I'm implementing the fixes there, including persistent scores and keyboard controls: R for round restart, M for match reset, and X/O to choose who starts next round.

Edited 4 files, ran a command

- Wrote `./Sem5/SE/Lab4/09_tic_tac_toe/tic-tac-toe/game/game_engine.py` (+55 -24)
- Wrote `./Sem5/SE/Lab4/09_tic_tac_toe/tic-tac-toe/game/renderer.py` (+2 -2)
- Wrote `./Sem5/SE/Lab4/09_tic_tac_toe/tic-tac-toe/game/rules.py` (+4 -3)
- Wrote `./Sem5/SE/Lab4/09_tic_tac_toe/tic-tac-toe/game/game_engine.py` (+1 -1)
- Ran `python -m py_compile main.py game/*.py; git diff -- game/game_engine.py game/rules.py game/renderer.py`

The implementation is complete. One shell-specific compile command didn't expand the wildcard on PowerShell, so I'm doing a direct syntax check on the three Python modules and reviewing the final diff now.

Ran a command

- Ran `python -m py_compile main.py game/game_engine.py game/rules.py game/ai.py game/renderer.py; git status --short`

Implemented all requested tasks in:

- `game_engine.py`
- `rules.py`
- `renderer.py`

Added diagonal detection, correct win/draw ordering, move validation, round-end protection, persistent scoreboard, first-player selection, and separate controls:

- R: restart round
- M: reset match and scoreboard
- X: X starts next round
- O: O starts next round

Python syntax validation passed.
